

## Overview:

## GOAL: REDUCE CARBON EMISSIONS

### Strategies:

1. Establish a 1-day instead of a 5-day in-person work week model post-covid.
2. With these savings Marsh can undertake a second initiative that re-allocates their resources and unused office space to make the building multi-use by hiring an in-door aeroponic tower company called Copiana that will install, maintain, and host monthly harvests from the installed plant towers.

### Results:

- a reduction in commuting will save 1.9 million lb of CO<sub>2</sub> from being emitted
- each employee will save \$851 on gas expenditures each year
- a reduction in building usage will prevent over 710,000 lbs of CO<sub>2</sub> from being released,
  - over \$7,000 can be saved in carbon offsets
- by growing leafy greens locally, over a total of 10 million lb of CO<sub>2</sub> emissions can be reduced by eliminating the need to buy that produce in-store which reduces transportation emissions
